Response to Arguments

1. Applicant's arguments, filed 7/20/2007, with respect to Claims 1-6 have been fully considered and are persuasive. The rejections have been withdrawn. Corrections to Fig. 1 and the amendments to the disclosure are approved.

Allowable Subject Matter

1. Claims 1-3,6 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art references cited disclose an image pickup apparatus with enlargement circuit to cut the video signal, or thin out the signal, and also means to interpolate the thinned out signal. The references also disclose means to extract a high frequency component using digital filters. Prior art references cited in the first office action teaches means to change the band of the frequency component. However, the prior art fails to teach that the signal that has been thinned out, or cut, and interpolated is the signal that is processed through the changing means to change the band of the frequency component for the purpose of autofocus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kyuma et al. (US 6445416) teaches an electronic zoom camera which thins out and interpolates signals.

Kaji (US 5838370) teaches an image pickup apparatus comprising an image enlargement circuit and interpolation means and means to extract frequency.
